

GreenPrints: A pathway to Earth centred governance

Dr Michelle Maloney
Australian Earth Laws Alliance
convenor@earthlaws.org.au

Overview

- ▶ GreenPrints focuses on a critical question: how can we create governance and legal systems that help us live within our ecological limits and nurture the Earth community?
- ▶ While we have 'blueprints' to document the design of building and engineering projects, we don't yet have effective 'greenprints' for helping us construct the governance systems we need, to build Earth centred societies that can be sustained in a climate changed world and nurture the Earth community.

GreenPrints

- ▶ Created by, and designed for, civil society action first, then advocacy
- ▶ It weaves together a range of existing, successful approaches to help us transition to post-growth, truly sustainable human societies
 - Transition Towns, Voluntary Simplicity, industrial ecology, Ecological Footprint system, protected area management, 'caring for country' strategies, New Economy initiatives, ANDI (Australian National Development Index)
 - Earth systems science, Planetary Boundaries, Great Transition, scenario planning
- ▶ *It begins not with our aspirations and 'visions' for a better future ... but with taking an Earth centred approach to ecological health*

Our network of 'builders'

- ▶ Lovely people!
- ▶ Awesome professionals, from many disciplines
- ▶ Fantastic First Nations colleagues
- ▶ Expert Advisory Group
 - Emeritus Professor Ian Lowe, Griffith University
 - Professor Brendan Mackey, GCCRP
 - NRM – natural resource management advisors
 - First Nations Peoples – advisory group – Adjunct Professor Mary Graham, Ross Williams, Valentine Nona
 - Community economics, community building, New Economy Network Australia
 - Arts, creatives
 - Ecospirituality

Our first community participants

- ▶ Palm Island – First Nations Peoples are working with AELA on a sustainability hub, economic self-determination
- ▶ Northern NSW – artists and First Nations Peoples
- ▶ Communities in central Victoria

Earth jurisprudence calls for us to examine the root causes of the current ecological crisis and transform our governance systems (rules, laws, ethics, institutions) from human centred to Earth centred

Human centred

Earth centred

Three 'big' problems GreenPrints is addressing

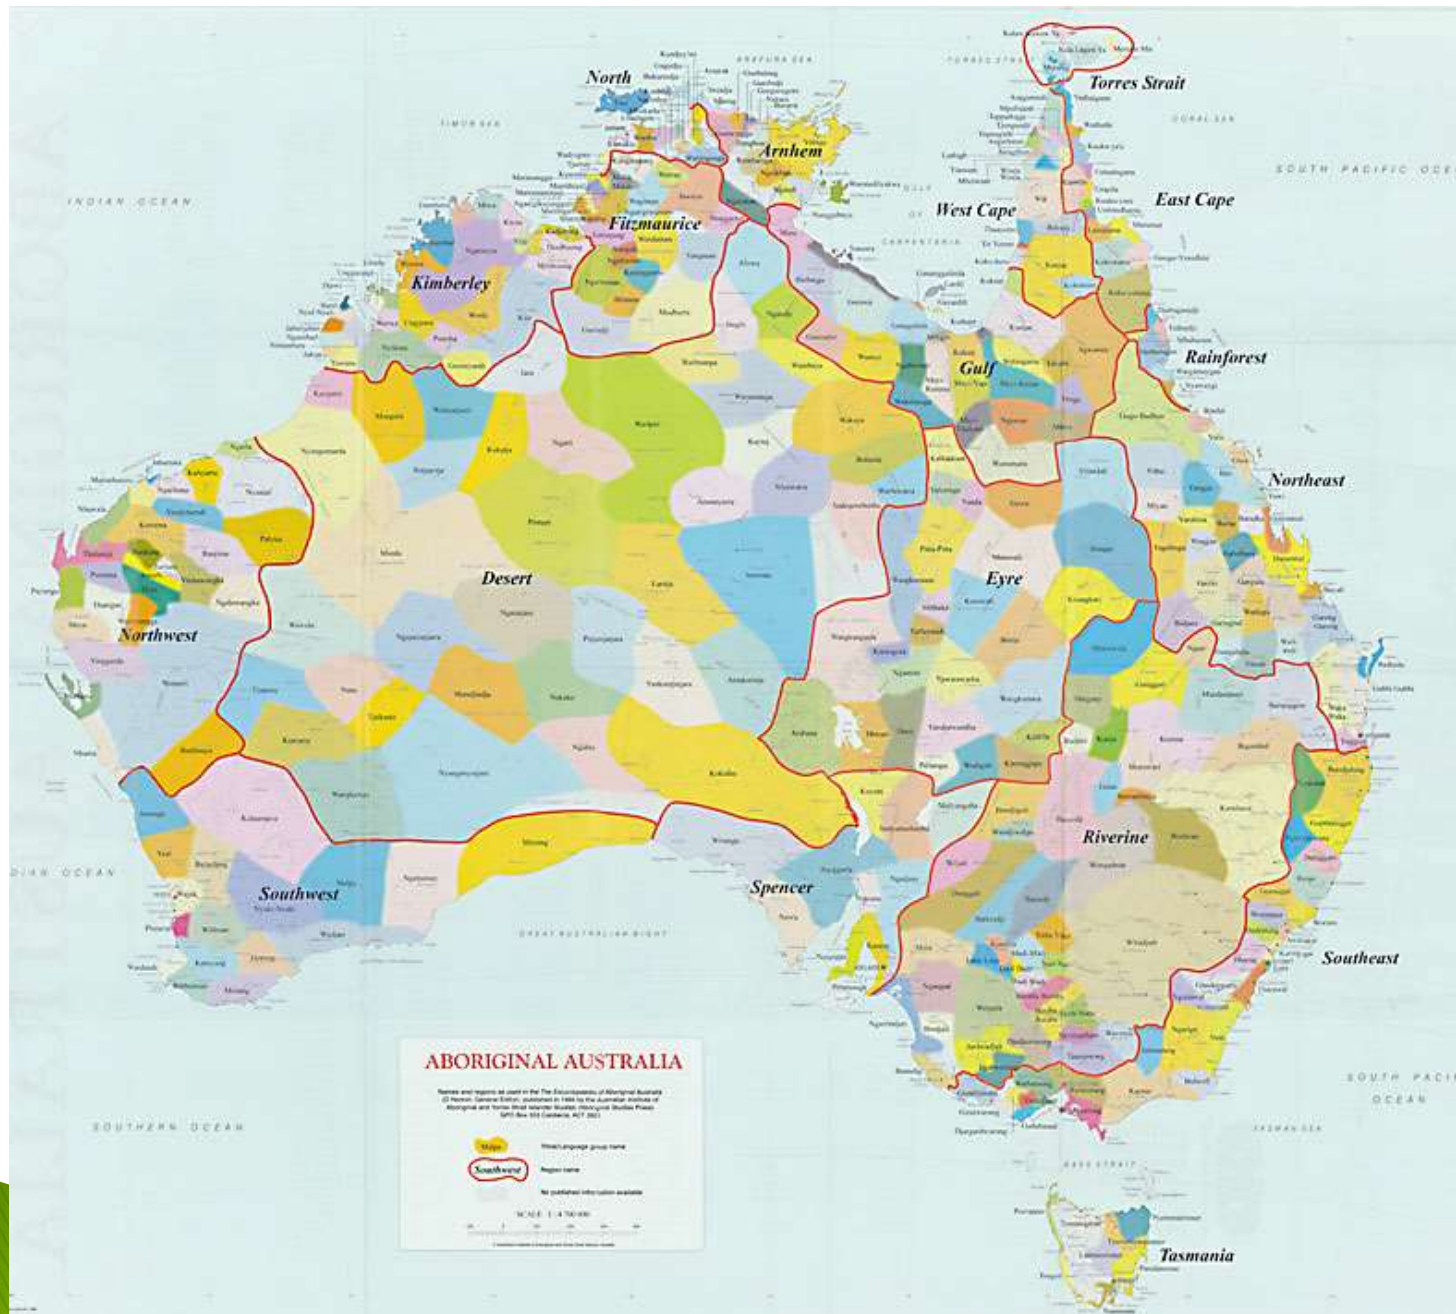

(1) Problem – pro-growth culture and governance

- ▶ Presently, the underpinning governance structures (rules, laws, ethics, institutions) of industrial societies are anthropocentric and designed to support unlimited growth on a finite planet
- ▶ We must change our governance systems to live within our ecological limits and respect the wider Earth community

(2) Problem – *political jurisdictions and governance* disconnected from ecological reality (ie human centred, pro-growth)

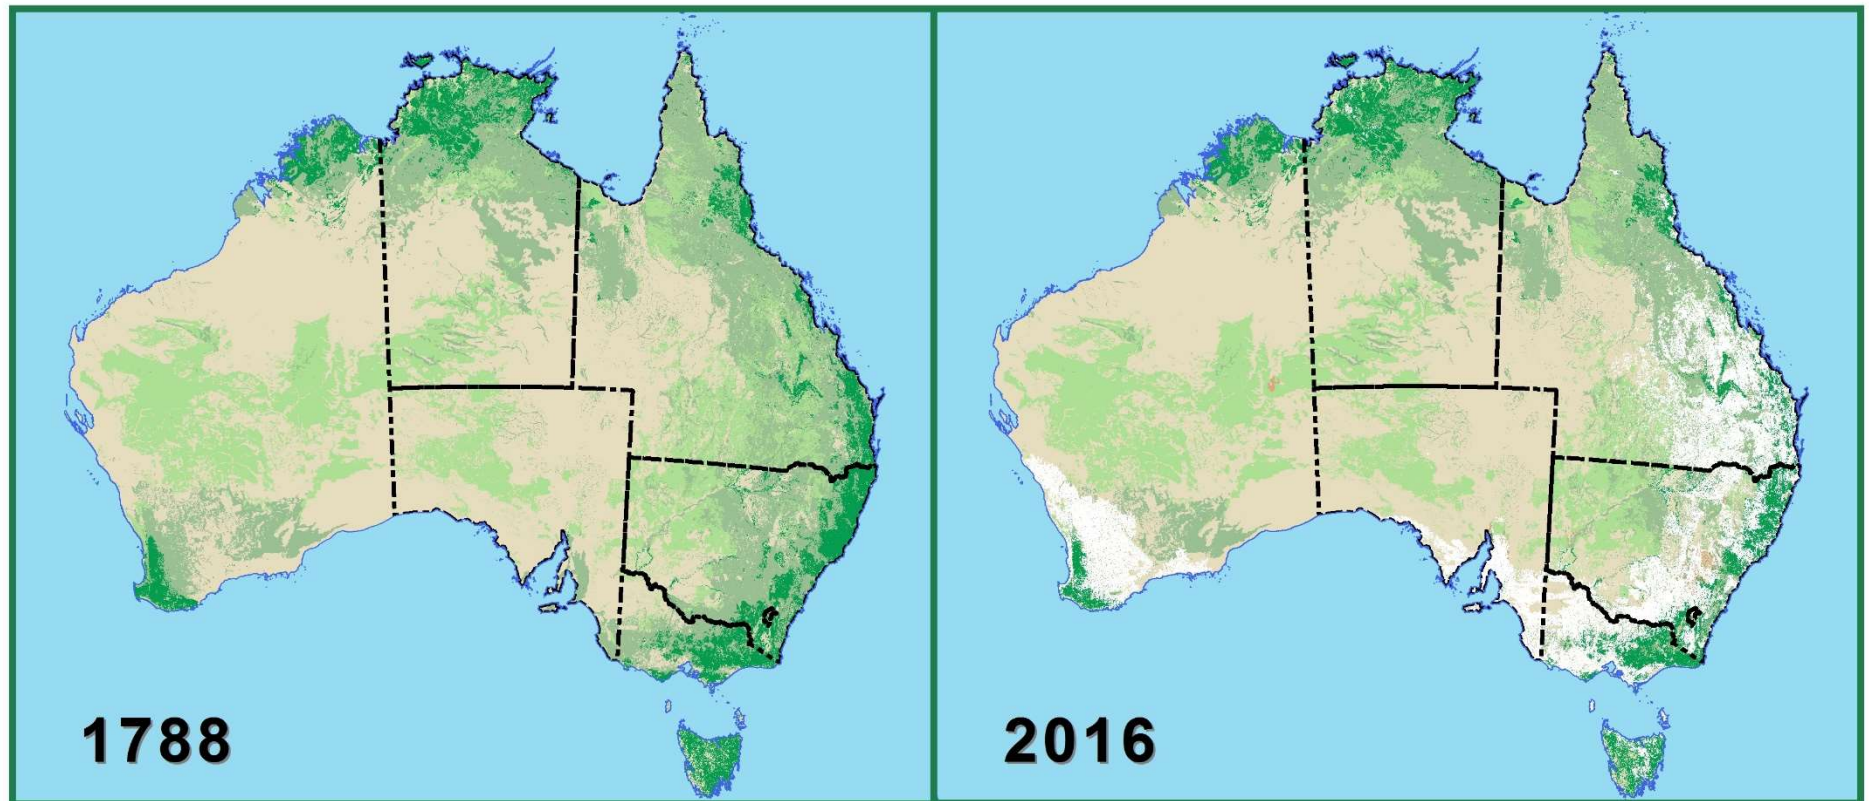

This continent
experienced
a dramatic
shift in
governance

From
60,000+
years of
effective,
local,
Earth-centred,
Steady-state
governance ...

To 230 years
of environmentally
disconnected
governance,
based on human
centred, pro-growth
culture and medieval
English laws

Results of this human-centred governance?

Vegetation Loss in Australia 1788-2016

- Eucalypt Forests and Rainforest
- Eucalypt Woodlands
- Other Forests or Woodlands
- Other vegetation (no trees)

Loss
20.1%
27.8%
10.5%
6.0%

Cleared since 1788 13.0%

(3) Problem – ineffective models of sustainability

Mickey Mouse Sustainability vs Nested Sustainability

Since the 1980s/90s – governance
influenced by ‘Sustainable Development’
= balancing different *human* values

This produced 'Mickey Mouse' sustainability

And it hasn't stopped the destruction of the natural world

The solution

Nested sustainability – Earth centred
governance

‘Strong’ sustainability

Earth centredness = ‘nested’

Simple overview of GreenPrints

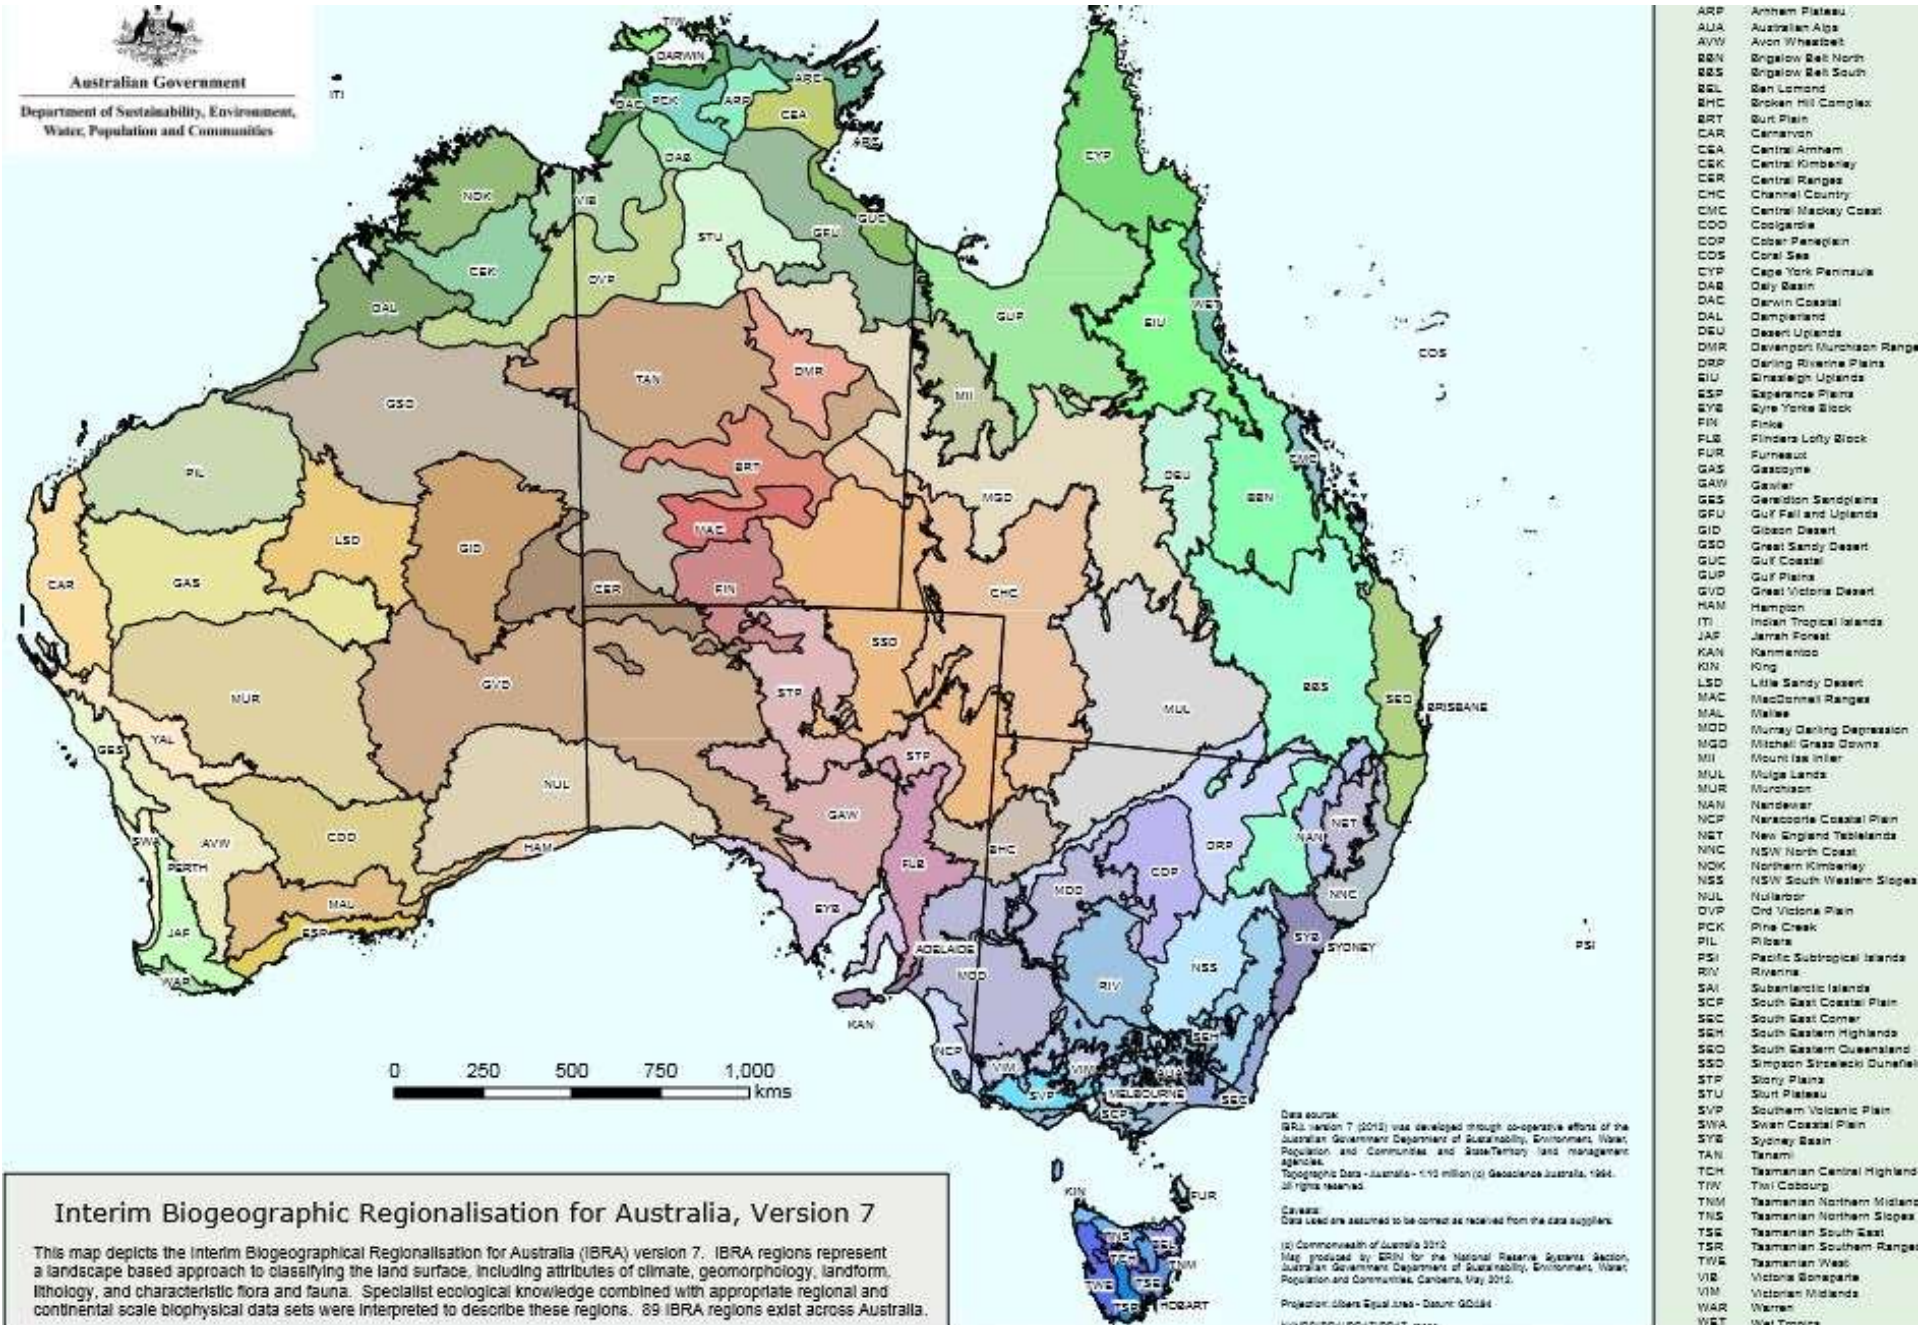

Starting with bioregional ecological health, to
set 'parameters' around human activities

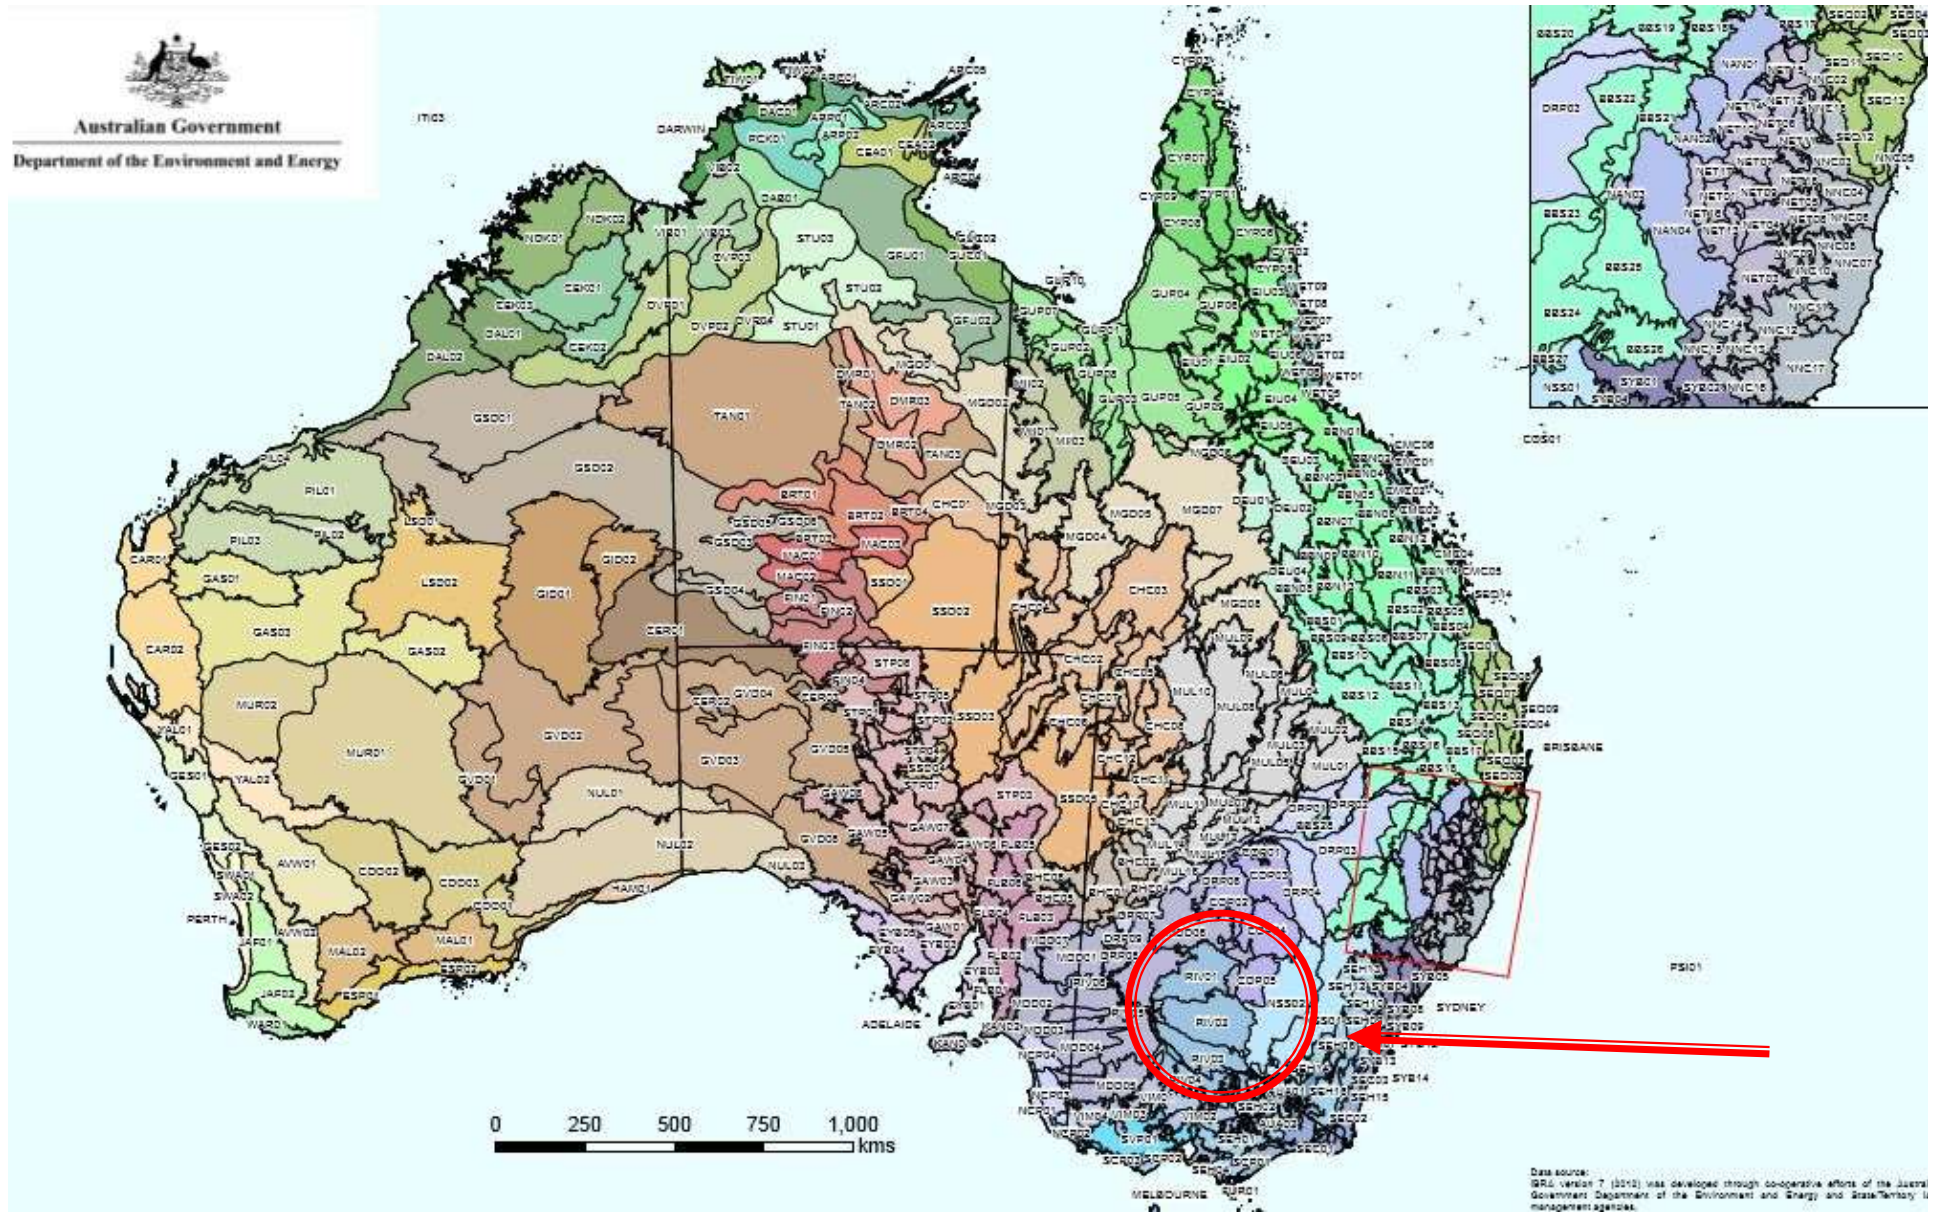

What is a bioregion?

- ▶ a region defined by characteristics of the natural environment rather than by man-made divisions
- ▶ relatively large land areas characterised by broad, landscape-scale natural features and environmental processes that influence the functions of entire ecosystems.
 - These patterns in the landscape are linked to fauna and flora assemblages and processes at the ecosystem scale, thus providing a useful means for simplifying and reporting on more complex patterns of biodiversity.
 - (NSW Office of Environment and Heritage)

Australia has 89 bioregions

419 sub-regions

Example of GreenPrints method: getting to know the Riverina bioregion (+subregions)

Home

What does bioregional ecological health look like *in this place*?

Approaches

Indigenous knowledge
Science
History

Core issues

Waterways
Vegetation
Soils
Biodiversity

Scenarios for bioregional health

What does ecological health look like?

- Optimal
- Okay
- Unhealthy

Nesting human society within a healthy bioregion

How much space is left for human activity in our different scenarios?

Questions

Population
Consumption
Space
Lifestyle
Culture
Education
Human health

Create human economies that fit within social goals and eco-health

New Economy
Steady State
Ecological economics
Industrial ecology

Questions

What does our
healthy bioregion
enable us to:

Grow
Water
Eat
Cut down
Import/export
“do”

Bio-regional governance

How do we create and retrofit laws, rules, ethics and institutions to support this Earth centred governance?

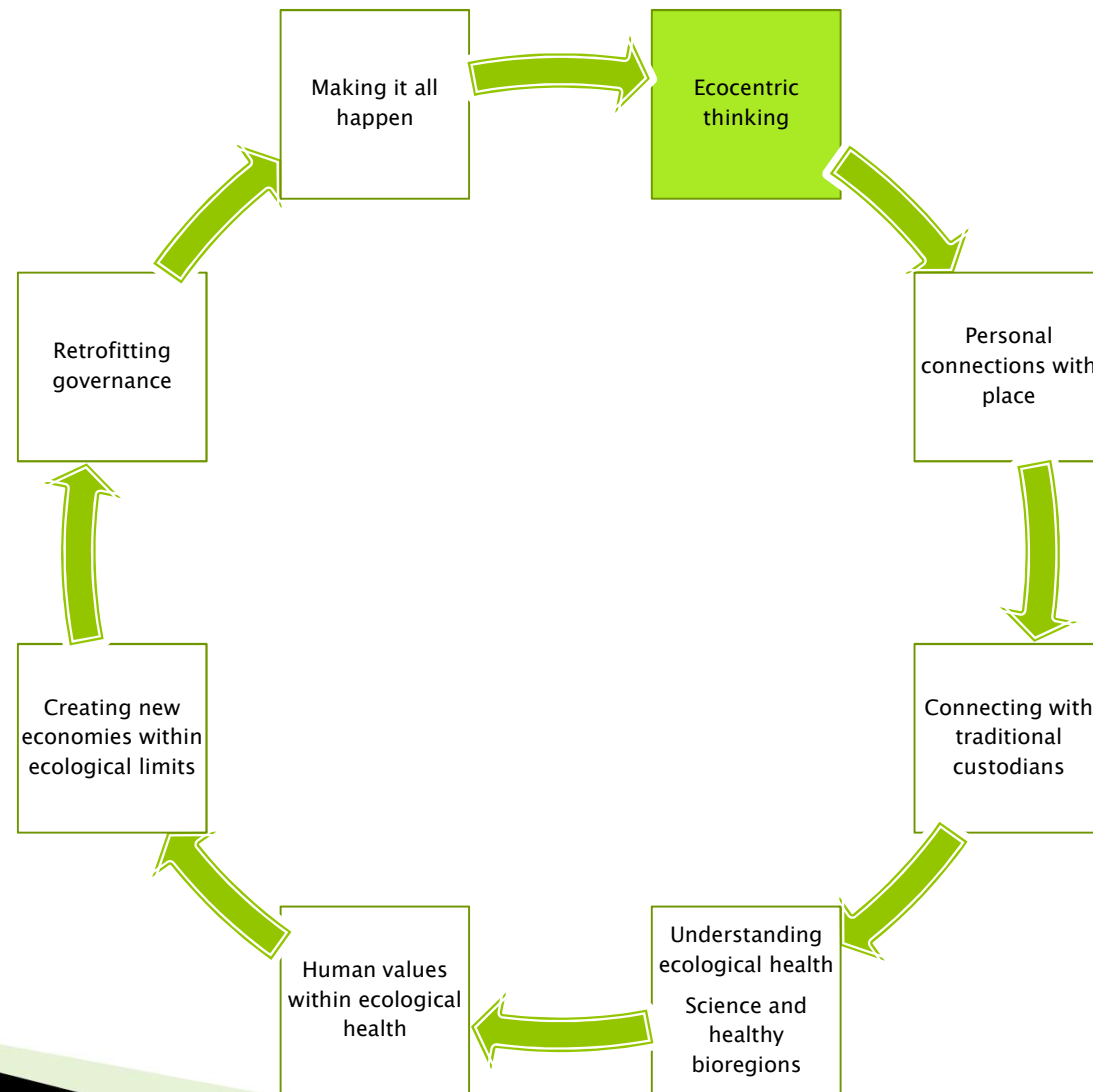

Questions

How do we enshrine rules for healthy bio-regions into new governance?

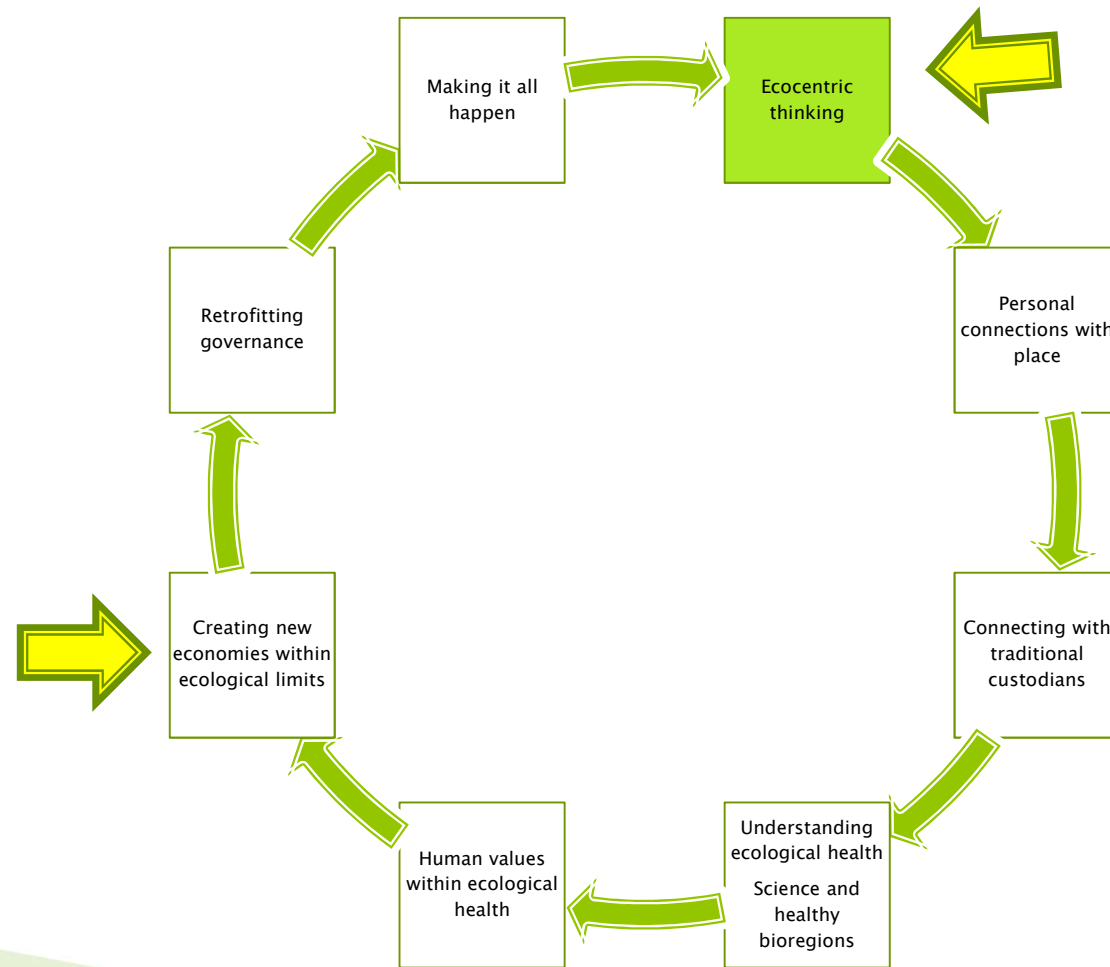

How can we work within existing local/state jurisdictions but focus on bioregional health?

greenprints

GreenPrints as a pathway

Pilot communities have different 'entry points' into this pathway

2017 and 2018

- ▶ Working with handful of groups, trialling how we 'do this' in their bioregion
- ▶ Open invitation to community members from all professions, traditions, to get involved
- ▶ Email Michelle Maloney
- ▶ convenor@earthlaws.org.au
- ▶ Thank you! 😊

Your invitation

- ▶ Critique our approach
 - ▶ Comment, make suggestions
 - ▶ Join us and connect your community
 - ▶ Tell others
 - ▶ (give money 😊)
-
- ▶ convenor@earthlaws.org.au
 - ▶ Thank you!
